Extended drug list — proposal for review (catalog 0.3.0-proposed)

Proposal, not yet in the app. The app still uses `data/drug_catalog.json` 0.2.0 (14 drugs) until the team approves this list (OD-2) and decides OD-30 and OD-32. Verified 2026-11-13.

How the list was made (same method as the original 15)

1. **Ranking.** CMS *Medicare Part D Prescribers — by Geography and Drug*, data year 2023, National rows (file, SHA-256 `876ff262c8a3eb0b8fca312f2004f14d42a8bfd01829e0695d64e34b5191f4f8`). Generic names ranked by total claims, summed over brand names; the top 200 are taken. These cover 88.7% of all 1,616,932,462 Part D claims in 2023. This reproduces the original list: ranks 1–18 match OpenPrescriber's published top 20 exactly (19 and 20 swap). OpenPrescriber's counts are about 42–44% of CMS's official national totals, so the counts here come from CMS directly.
2. **Ingredients.** Each CMS name is mapped to RxNorm ingredients and verified exactly on RxNav, with every salt form (precise ingredient). CMS abbreviations that cannot be matched automatically are mapped in a small, listed override table (`scripts/catalog/step1_rank_and_map.py`) and still verified.
3. **Scope.** FDA's NDC Directory (openFDA) must list at least one **oral, prescription** product with exactly that ingredient set. Inhalers, eye drops, skin products, injections, sublingual products, kits, vaccines and supplies are out of scope, as today.
4. **Exclusions.** The existing exclusion policy (anticoagulants, transplant immunosuppressants) is applied unchanged. Digoxin is switched off pending OD-32 (narrow-therapeutic-index criterion).
5. **App check.** For every drug, the app's own code reads a real FDA product record, decides eligibility against this catalog (before and after the RxNav step), and runs the recall search it would send. All 165 drugs behave exactly as listed below. Drugs whose recall search would find fewer records than the plain ingredient name are switched off until app fix F1.
6. **Validation.** The proposed catalog passes the app's configuration validator and precedence self-test (`npm run config:validate -- --catalog-file data/proposals/drug_catalog_0.3.0-proposed.json`).

Summary

Decision	Drugs	Share of all 2023 Part D claims
In the app now	14	29.1%
Add (active)	130	45.4%
Add (switched off until a fix or decision)	17	4.7%

Decision	Drugs	Share of all 2023 Part D claims
Excluded by policy	4	2.2%
Out of scope (not oral, or not a drug)	31	7.3%

Coverage of all 2023 Part D claims: today 29.1%; with this list 74.5%; after fix F1 and the pending decisions, up to 79.2%. Shares count all of a drug's claims, including forms the app does not cover (for example estradiol patches); the app checks oral prescription products only.

App fix F1 (small, needed for 14 drugs): teach the label/record reader the salt words bisulfate, oxalate, hydrobromide, hyclate, mononitrate, propanediol, dihydrochloride, phosphate, gluconate, palmitate, tromethamine, saccharate and aspartate, so the recall search uses the plain ingredient name. Then re-run step 4 and switch those drugs on.

Worth a second look before approving: methotrexate (an immunosuppressant used outside transplant, so the transplant criterion does not cover it); sacubitril/valsartan (0 recall records found, plausible for a brand-only product); timolol and estradiol (most of their claims are eye drops or patches, which the app does not cover).

The list

Columns: CMS rank; CMS generic name(s); 2023 claims; RxNorm ingredient(s) with RxCUI; decision; catalog drug ID; oral prescription products in FDA's NDC Directory; recall records the app's search finds today (openFDA enforcement, 2026-11-13); one real product NDC used for the app check; reason. The 200 CMS names make 196 rows: names that are the same ingredient are one row (for example "Ondansetron" and "Ondansetron Hcl"). Product and recall counts are per ingredient set across all salts, so metoprolol succinate and tartrate show the same counts.

#	CMS generic name	Claims 2023	Ingredient (RxCUI)	Decision	Catalog ID	FDA oral Rx products	Recall records found	Example NDC	Reason
